com amor, styled-components

02

CONTEXTO

React, React Native

MODELANDO

O exemplo

DESAFIOS

Cotidianos e
Problemas.

DO

Design para a
Implementação.

React Native

Uma biblioteca para construir aplicativos nativos usando React.

React Native is a JavaScript framework for writing real, natively rendering mobile applications for iOS and Android.

It's based on React, Facebook's JavaScript library for building user interfaces, but instead of targeting the browser, it targets mobile platforms.

Core Components

06

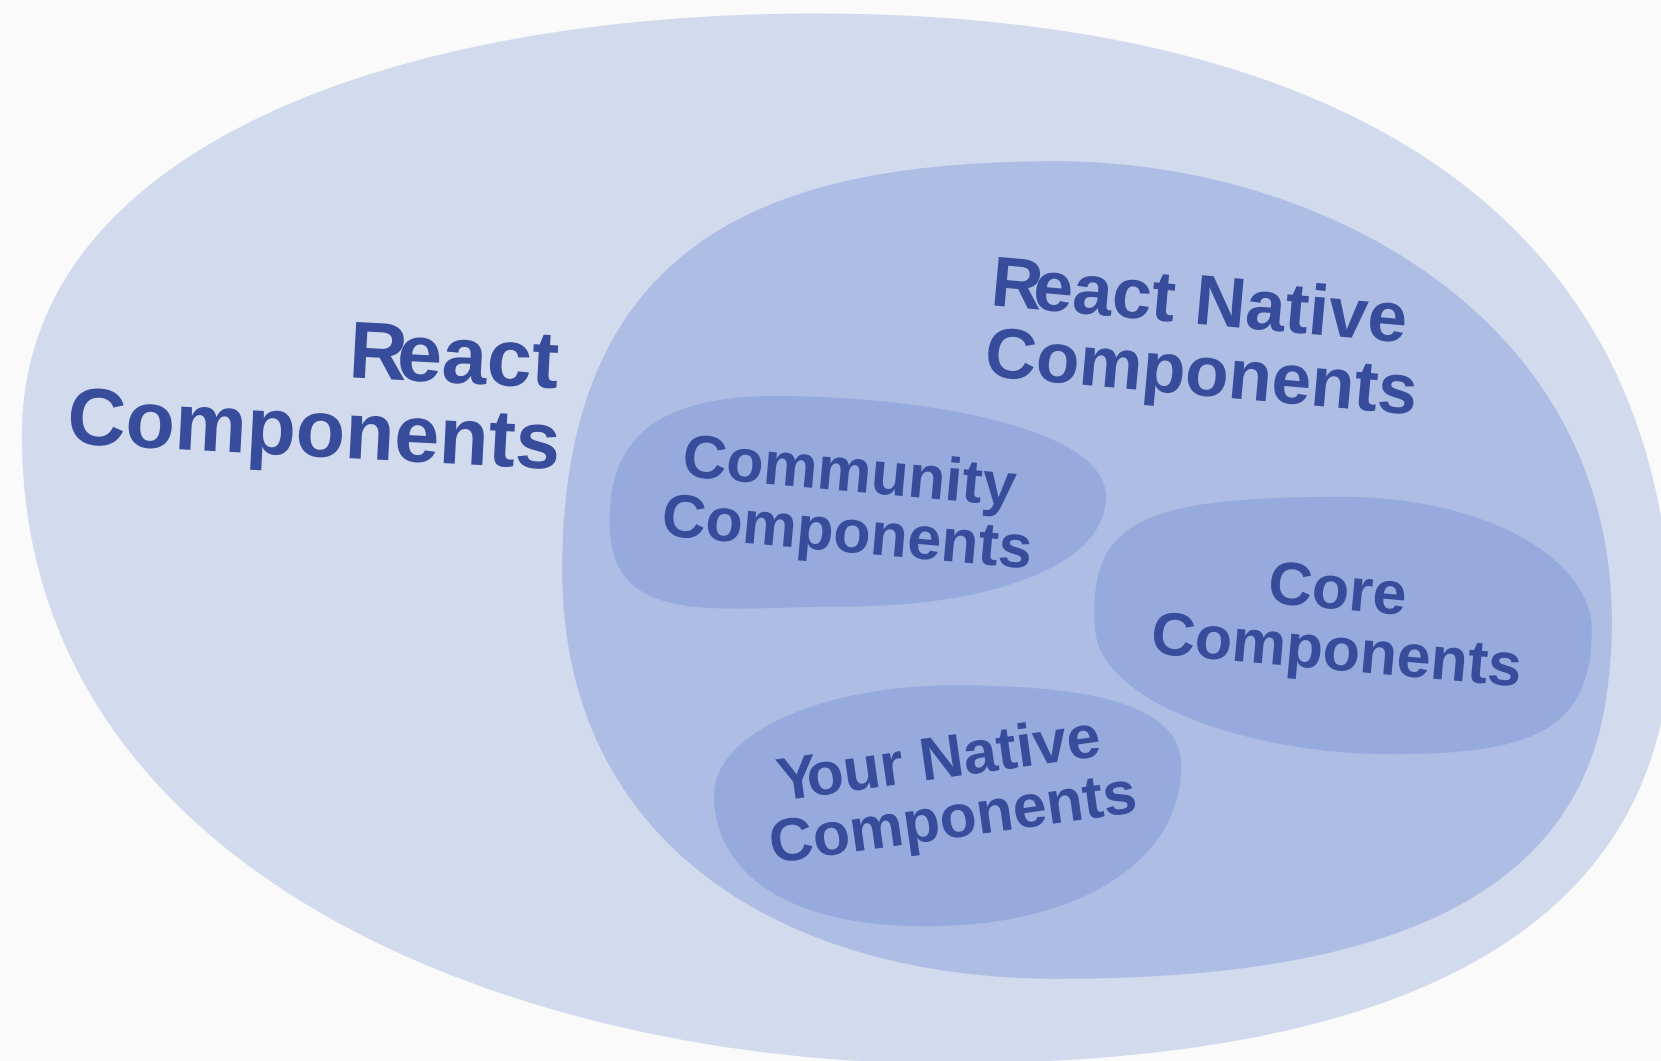

REACT NATIVE UI COMPONENT	ANDROID VIEW	IOS VIEW	WEB ANALOG	DESCRIPTION
<code><View></code>	<code><ViewGroup></code>	<code><UIView></code>	A non-scrollling <code><div></code>	A container that supports layout with flexbox, style, some touch handling, and accessibility controls
<code><Text></code>	<code><TextView></code>	<code><UITextView></code>	<code><p></code>	Displays, styles, and nests strings of text and even handles touch events
<code><Image></code>	<code><ImageView></code>	<code><UIImageView></code>	<code></code>	Displays different types of images
<code><ScrollView></code>	<code><ScrollView></code>	<code><UIScrollView></code>	<code><div></code>	A generic scrolling container that can contain multiple components and views
<code><TextInput></code>	<code><EditText></code>	<code><UITextField></code>	<code><input type="text"></code>	Allows the user to enter text

Vida Real

Quais os nossos desafios?

Criar softwares escaláveis, que nos permita o crescimento sustentável de nossa aplicação.

Problemas ou soluções?

Códigos reutilizáveis. Manutenibilidade.

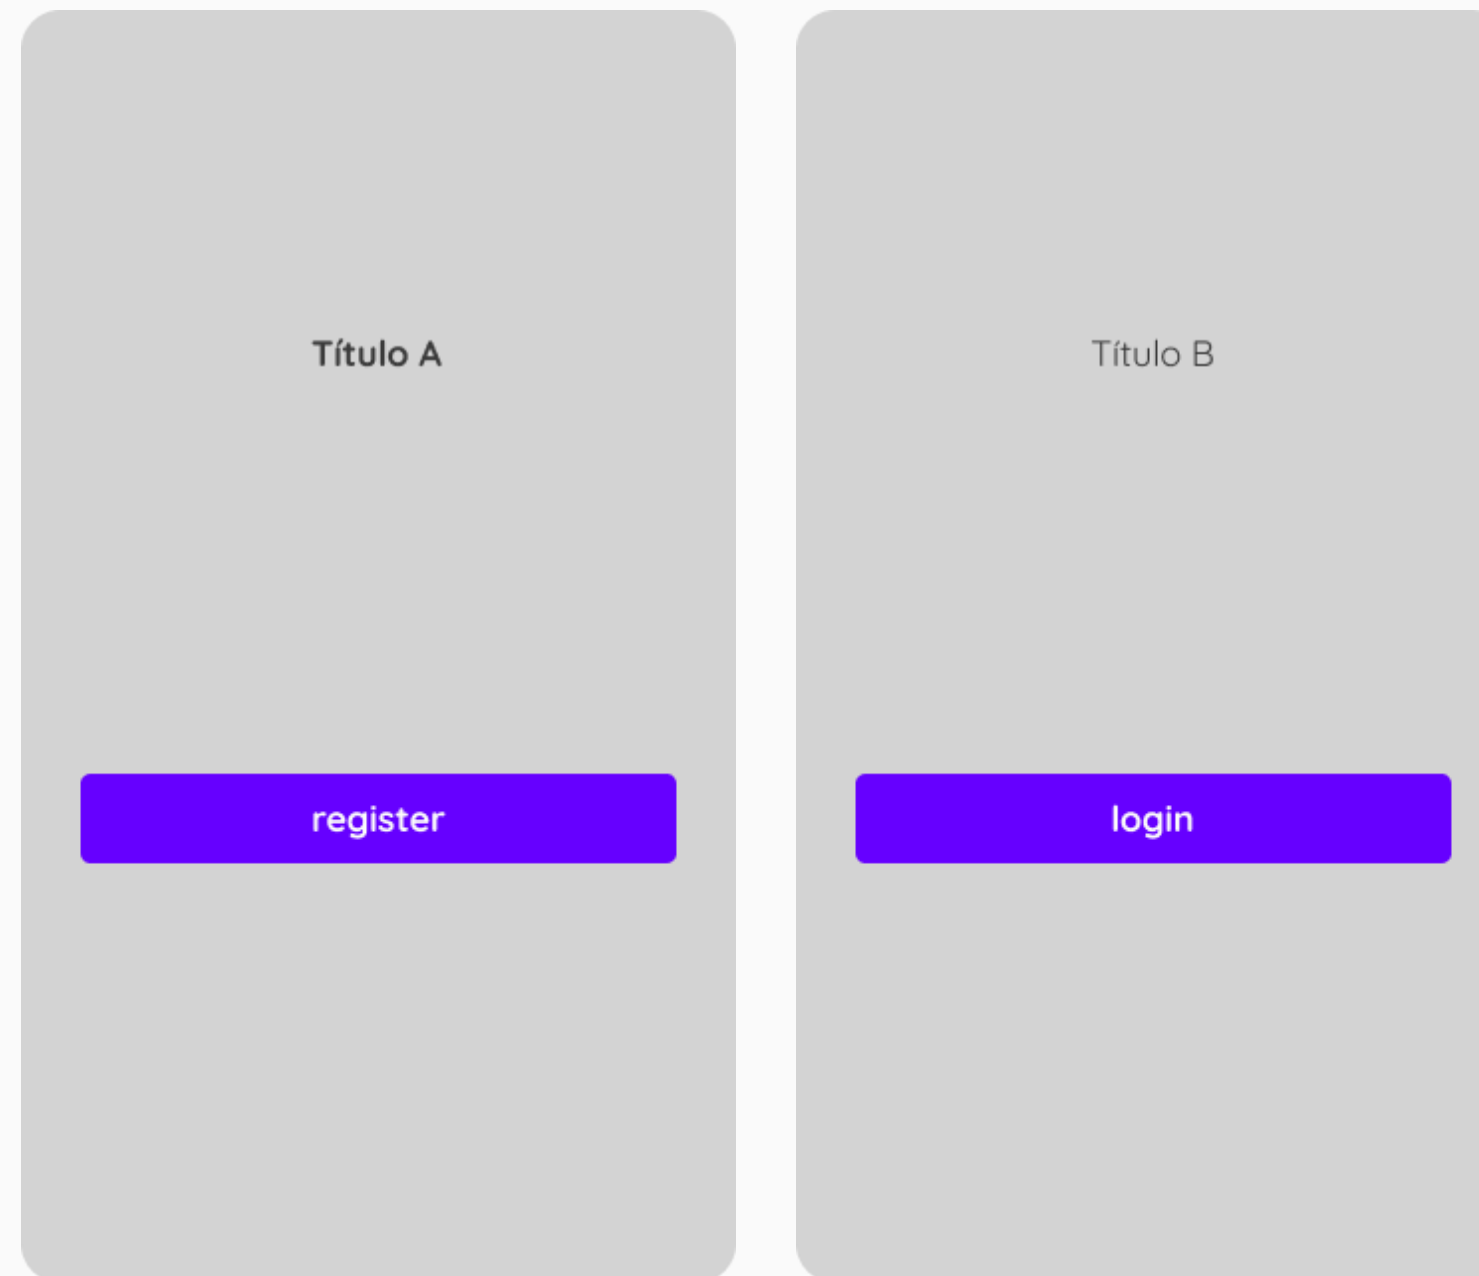

Exemplo

Problemas à vista

ctrl+c, ctrl+v

mudanças = dor de cabeça

padrão?

Exemplo

Problemas à vista

O que acontece se eu der control + c, control + v nos meus componentes e por ventura precise realizar alguma alteração de cor?

Vamos simplificar. Alteração no tamanho da fonte.

styled-components (do-amor)

css-in-js;

components: Documentation

Learn how to use styled-components and to style your apps without stress

 styled-components

criando um componente

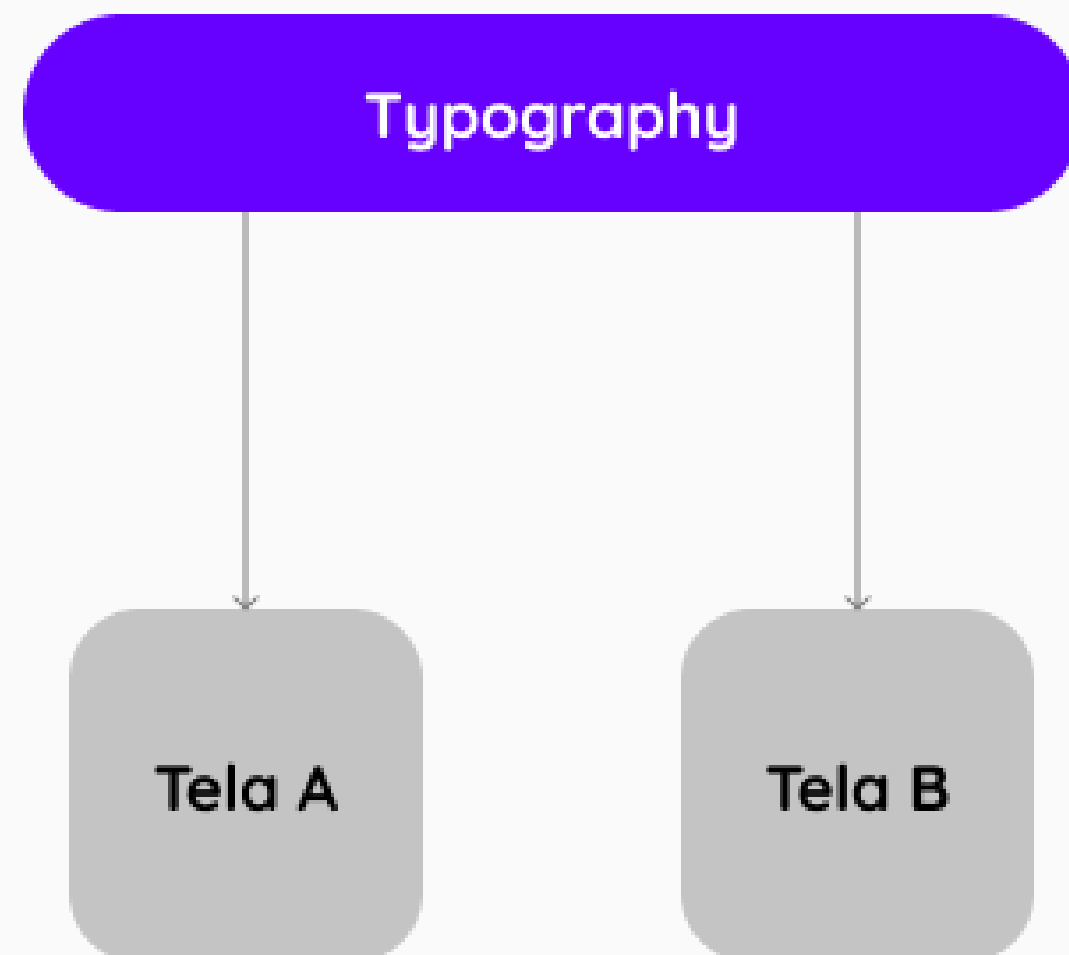

```
// components/Typography/styles.js  
  
import styled from 'styled-components/native';  
  
export const Label = styled.Text``;
```

```
// components/Typography/index.js  
  
import { Label } from './styles';  
  
const Typography = () => <Label>Hello World</Label>;  
  
export default Typography;
```

utilização em diferentes cenários

padronização

reutilização

Estilos Centralizados

```
// components/Typography/styles.js  
  
export const Label = styled.Text`  
  color: #2ed47b;  
`;
```

Escopos Locais

sem efeitos colaterais

✓ | —

Estilos Dinâmicos

```
// components/Typography/styles.js
export const Label = styled.Text`
  color: #2ed47b;
  ${({ bold }) => bold && { 'font-weight': 'bold' }}
`;
```

18

)

|

)

Estilos Dinâmicos

```
// components/Typography/index.js
```

```
const Typography = () => <Label bold={true}>Hello World</Label>;
```

18

Construções dinâmicas

através das props

Tela -> Componente

```
// App.js
import { Typography } from './src/components';

const App = () => {
  return (
    <
      <StatusBar barStyle="dark-content" />
      <SafeAreaView>
        <Typography />
        <Typography bold />
      </SafeAreaView>
    </>
  );
};

export default App;
```

```
// components/Typography/index.js
const Typography = ({ bold }) =>
  <Label bold={bold}>Hello World</Label>;
```

Alterações locais + estilos dinâmicos

`bold={true}`

`bold={false}`
